# 1

## Supported Technologies

This page lists the technologies that InterSystems products support.

### 1.1 Supported Platforms

This release supports the listed server platforms and operating system releases on the indicated InterSystems products.

- [Server Platforms](#)
- [Container Platforms](#)
- [Cloud Platforms](#)
- [Development Platforms](#)

#### 1.1.1 Operating System Patches and Service Packs

Because InterSystems relies on the operating system vendor to ensure compatibility, InterSystems does not certify its products for specific operating system patches or service packs.

In the rare event that a specific patch or service pack (SP) is required to run InterSystems products, the appropriate table indicates the explicit requirement.

If a vendor introduces new features or functionality in a base version to create a new offering, InterSystems does not do additional testing but relies on the vendor to assure the quality of the base version.

## 1.1.2 Server Platforms

Platform	Notes
IBM AIX® 7.2, 7.3 for POWER System-64 (POWER 8 and higher)	<p>InterSystems IRIS supports OpenSSL 3.0 on AIX 7.2 and 7.3 via the aixopenssl30 kit. This kit has, as prerequisites, the latest Tech Level for either AIX 7.2 and 7.3.</p> <p>InterSystems IRIS for AIX was compiled using the IBM XL C/C++ for AIX 16.1.x and 17.1.x compilers. If the system on which you are installing InterSystems IRIS does not have both of these versions of the compiler or runtime already installed, you must install them both. First install 16.1.x, then 17.1.x.</p> <p>See <a href="https://www.ibm.com/support/pages/node/612497#171X">https://www.ibm.com/support/pages/node/612497#171X</a> for more information.</p>
Microsoft Windows Server 2016, Server 2019, Server 2022, 10, 11 for x86-64	
Oracle Linux 8.2+, 9.0, 9.2 for x86-64	Unmodified kernel.
Red Hat Enterprise Linux 8.6, 8.8, 9.0, 9.2 for x86-64 or ARM64	To use Kerberos on the Red Hat platform, you must install the krb5-devel package in addition to the krb5-libs package. See the <a href="#">Red Hat Linux Platform Notes</a> section of the “Preparing to Install InterSystems IRIS” chapter of the <i>Installation Guide</i> for detailed information on obtaining these components.
SUSE Linux Enterprise Server 15 SP3, SP4, SP5 for x86-64	
Ubuntu 20.04, 22.04 LTS for x86-64 or ARM64	A default Ubuntu setting can result in semaphore deletion. See the Ubuntu Platform Notes section of the “Preparing to Install InterSystems IRIS” chapter of the <i>Installation Guide</i> for more information.

## 1.1.3 Container Platforms

Container images from InterSystems comply with the [Open Container Initiative \(OCI\)](#) specification and are built using the Docker Enterprise Edition engine, which fully supports the OCI standard and allows for the images to be [certified](#) and featured in the Docker Hub registry. InterSystems containers therefore are supported on any OCI compliant runtime engine on Linux-based operating systems, both on-premises and in public clouds.

InterSystems container images are built and tested using Ubuntu as their base operating system. These images are available for the CPU architectures shown below:

Image Operating System	CPU Architecture
Ubuntu 20.04, 22.04	<ul style="list-style-type: none"> <li>Intel/AMD 64-bit</li> <li>ARM 64-bit</li> </ul>

\* New for maintenance release 2022.1.1

## 1.1.4 Cloud Platforms

InterSystems IRIS can be successfully deployed on cloud platforms that meet both of the following criteria:

- The operating system platform is in the supported [Server Platform](#) list.
- The cloud platform provides support for their infrastructure.

Customers using mirroring on cloud virtual machines should note that the public clouds require IP addresses, as opposed to virtual IPs, for mirroring.

## 1.1.5 Development Platforms

In addition to the listed [Server Platforms](#), the following platforms are supported for development work:

Platform	Notes
<ul style="list-style-type: none"> <li>• Apple macOS 11, 12, and 13 for x86-64</li> <li>• Apple macOS 12 and 13 for ARM</li> </ul>	<p>InterSystems IRIS requires several dependencies to run on this platform. See <a href="#">Installing Required Dependencies</a> for more information.</p> <p>Key Management Interoperability Protocol (KMIP) is not supported on macOS.</p> <p>On the M1 platform, Shared Memory Connections (SHM) for Java are not supported.</p>

Support for development platforms is subject to the following qualifications:

- Development platforms are to be used for application development only; they are not supported for deployment of applications.
- The results of comparative analysis will not be underwritten by InterSystems. No valid conclusions can be drawn from performance, sizing, or other measurements taken on supported development platforms versus other supported platforms.
- InterSystems will reevaluate its continued support for these platforms with each major release of InterSystems IRIS.

## 1.1.6 Hardware Considerations

In most cases, this document focuses specifically on operating system versions, and only generally on the characteristics of the underlying hardware. This section is intended as a refinement of that approach, describing specific features of individual hardware offerings that InterSystems products recognize and use to their advantage.

### Advanced Encryption Standard (AES)

When run on Intel 64-bit processors, beginning with the Intel® Xeon® Processor (Westmere), InterSystems IRIS makes direct use of hardware instruction(s) to perform AES encryption.

## 1.2 Supported File Systems

This release supports the following file systems on the specified platforms:

Platform	Recommended File System	Other Supported File Systems
Apple macOS for x86-64	HFS	APFS
IBM AIX® for POWER System-64	JFS2 <sup>3</sup>	
Microsoft Windows for x86-64	NTFS	
Oracle Linux for x86-64	XFS	
Red Hat Enterprise Linux for x86-64 or ARM64	XFS	ext3 <sup>1</sup> , ext4 <sup>1,2</sup> , NFS
SUSE Linux Enterprise for x86-64	XFS	Btrfs, ext3 <sup>1</sup> , ext4 <sup>1,2</sup> , NFS
Ubuntu for x86-64 or ARM64	XFS	Btrfs, ext3 <sup>1</sup> , ext4 <sup>1,2</sup> , NFS

<sup>1</sup> The `data=journal` mount option for ext3/ext4 file systems is not supported.

<sup>2</sup> When using Linux, InterSystems recommends using the ext4 file system for the journal/WIJ and the XFS file system for data files.

<sup>3</sup> For optimum journaling performance, the `cio` mount option is recommended for JFS2 file systems.

## 1.3 Supported Web Servers

This release supports CSP technology on the following web servers for the indicated platforms. This does not necessarily mean that all InterSystems products run on these platforms, but rather that the InterSystems Web Gateway component does.

Web Server	Platform
Apache 2.4 *	<ul style="list-style-type: none"> <li>Apple macOS</li> <li>IBM AIX® for POWER System-64 **</li> <li>Oracle Linux</li> <li>Red Hat Enterprise Linux</li> <li>SUSE Linux Enterprise</li> <li>Ubuntu</li> </ul>
Microsoft IIS 7.0 and later	<ul style="list-style-type: none"> <li>Microsoft Windows</li> </ul>
Nginx (Stable)	<ul style="list-style-type: none"> <li>Apple macOS</li> <li>IBM AIX® for POWER System-64</li> <li>Microsoft Windows</li> <li>Red Hat Enterprise Linux</li> <li>SUSE Linux Enterprise</li> <li>Ubuntu</li> </ul>

\* InterSystems supports Apache on Microsoft Windows only for upgraded instances which still use an Apache [Private Web Server](#).

\*\* Using Kerberos security and/or SSL for the Web Gateway on 64-bit UNIX® platforms requires 64-bit Apache.

## 1.4 Supported Web Browsers

InterSystems IRIS supports CSP on the web browsers listed in the following tables.

### Browser Platforms

Newer versions of the browsers listed in the following table will be supported with the understanding that critical issues may be found that will have to be corrected in a major release of InterSystems IRIS. Those fixes will not be backported to earlier releases of InterSystems IRIS.

InterSystems also requires that browsers support the XML HTTP interface which limits support for some older browser versions.

Platform	Supported Web Browsers
Windows	Chrome, Edge, Firefox, Opera
Linux	Firefox
Android	Chrome
iOS	Safari
macOS	Chrome, Firefox, Opera, Safari

### Portals

Support for the InterSystems IRIS Management Portal is limited to the browsers listed in the following table. Except where noted, this includes support for InterSystems IRIS® Business Intelligence functionality. New versions released by vendors are assumed to provide backward compatibility; they are supported as described in [Supported Web Browsers](#) and are tested as they become available.

Web Browser (Platform)	Version
Chrome (Windows, macOS)	latest released
Edge (Windows)*	latest released
Firefox (Windows, macOS, Linux)	latest released

\*At this time, InterSystems does not fully support InterSystems IRIS® Business Intelligence functionality on Microsoft Edge.

## 1.5 ODBC Support

InterSystems products support multithreaded ODBC on most platforms.

The InterSystems ODBC driver on UNIX®-based systems supports the following driver managers:

- The iODBC driver manager (see <http://www.iodbc.org>) — for use with the Unicode and 8-bit ODBC APIs; works with the **select** executable and the following drivers:

libirisodbc35.so	iODBC 3.5 driver
libirisodbcw35.so	iODBC 3.5 unicode driver

- The unixODBC driver manager (see <http://www.unixodbc.org>) — for use with the 8-bit ODBC API only; works with the **selectu** executable and the following driver:

libirisodbcur6435.so	unixODBC Real Mode built 3.5 driver
----------------------	-------------------------------------

## 1.6 Node.js Support

This release supports Node.js clients on the platforms and operating system versions listed in the [Supported Server Platforms](#) table. For information about installation and configuration, see Native SDK for Node.js.

## 1.7 Platform Endianness

When restoring a backup or transferring a database, the target system must be the same Endianness (Big-endian or Little-endian) as the source system; for example, if a backup was created on a Big-endian system, it cannot be restored to a Little-endian system. For information, see “Using cvendian to Convert Between Big-endian and Little-endian Systems”.

The following table identifies the Endianness of the supported server platforms for this release:

Platform	Endianness
Apple macOS for x86-64	Little-endian
IBM AIX® for POWER System-64	Big-endian
Microsoft Windows for x86-64	Little-endian
Oracle Linux for x86-64	Little-endian
Red Hat Enterprise Linux for x86-64 or ARM64	Little-endian
SUSE Linux Enterprise Server for x86-64	Little-endian
Ubuntu for x86-64 or ARM64	Little-endian

## 1.8 Supported SQL Gateway Databases

The InterSystems IRIS SQL Gateway supports access to external databases from InterSystems IRIS so long as:

- The external database is supported by its manufacturer. For example, InterSystems IRIS can support a connection to Oracle 10g as long as Oracle 10g is still in Oracle's extended maintenance window.
- The connecting driver is compliant with the appropriate protocol. InterSystems IRIS supports ODBC 3.0 through 3.7 as well as JDBC 4.0 through 4.3.

The SQL Gateway provides features for querying external databases using the InterSystems IRIS SQL dialect. InterSystems regularly tests these features against the latest versions of the following database systems:

- IBM Db2
- IBM Informix
- Microsoft SQL Server
- MySQL
- Oracle
- Sybase Adaptive Server Enterprise

## 1.9 Supported .NET Frameworks

InterSystems supports .NET on Windows, Linux, and macOS. Versions of the .NET Framework are supported only on Windows. All InterSystems assemblies for .NET are installed to the .NET GAC (Global Assembly Cache) when InterSystems IRIS is installed.

**Note:** The InterSystems IRIS installation procedure does not install or upgrade any version of .NET or .NET Framework. Your client system must have a supported version of .NET or .NET Framework installed in order to use these assemblies.

There is a separate version of the IRISClient assembly (InterSystems.Data.IRISClient.dll) for each supported version of .NET and .NET Framework. These files are located in the following subdirectories of <iris-install-dir>\dev\dotnet (see “[Installation Directory](#)” in the *Installation Guide* for the location of <iris-install-dir> on your system):

- .NET Framework 3.5: \dev\dotnet\bin\v3.5
- .NET Framework 4.6.2: \dev\dotnet\bin\v4.6.2
- .NET 5.0: \dev\dotnet\bin\net5.0
- .NET 6.0: \dev\dotnet\bin\net6.0

The current default version is .NET 6.0.

**Note:** **Extra Requirements for XEP**

If your application uses both .NET Framework and XEP (see [Persisting .NET Objects with InterSystems XEP](#)), you must also declare the InterSystems.Data.XEP.dll assembly.

There is a separate version of this file for each of the following .NET versions:

- .NET Framework 3.5: \dev\dotnet\bin\v3.5
- .NET Framework 4.6.2: \dev\dotnet\bin\v4.6.2

XEP does not require a separate assembly if your application uses .NET 5.0 or 6.0.

In some applications, the .NET Framework assemblies may be used to load unmanaged code libraries. Both 32-bit and 64-bit assemblies are provided for each supported version, which makes it possible to create gateway applications for 64-bit Windows that can load 32-bit libraries.

If you wish to use a version other than the default for your system, some extra configuration will be required to set the path to your desired language platform.

**Note:** InterSystems IRIS .NET clients do not support Kerberos because the .NET framework does not include direct Kerberos support.

## 1.10 Supported Java Technologies

InterSystems Java products require a Java Development Kit (JDK) from Oracle (or a compatible JDK). This release supports the following JDKs:

Development Kits	Versions
Java SE Development Kit (JDK)	8, 11
OpenJDK	8, 11

Please contact InterSystems if you would like to take advantage of InterSystems product license sharing when running Java on Windows Terminal Servers.

## 1.11 Other Supported Technologies

This release supports other technologies as specified in the following tables:

Supported Libraries	Version
ICU	69.1
Xerces	3.2
Xalan	1.12*
OpenSSL	Instance-specific; to determine the version in use by the instance, call <code>\$SYSTEM.Encryption.OpenSSLVersion()</code>

\* New at this release.

ODBC Driver Managers	Version
unixODBC	2.3.4
iODBC	3.52.4

## 1.12 Other Supported Features

InterSystems products support the LDAP protocol, multithreaded callin, T-SQL programming extensions, the MQ Interface, and Embedded Python as indicated in the following table. (Supported operating system versions are those listed in the [Supported Server Platforms](#) table.)

Platform	Supported Features	Version of Python Supported for Embedded Python
Apple macOS for x86-64	LDAP, T-SQL, Embedded Python	Python 3.9 (installed using homebrew) <sup>2</sup>
IBM AIX® for POWER System-64	LDAP, T-SQL, MQ Interface <sup>1</sup>	N/A
Microsoft Windows for x86-64	LDAP, Multithreaded Callin, T-SQL, MQ Interface <sup>1</sup> , Embedded Python	Python 3.9 (included in InterSystems IRIS installer) <sup>2</sup>
Oracle Linux for x86-64	LDAP, Multithreaded Callin, T-SQL, MQ Interface <sup>1</sup> , Embedded Python	Python 3.6 <sup>2</sup>
Red Hat Enterprise Linux for x86-64 or ARM64	LDAP, Multithreaded Callin, T-SQL, MQ Interface <sup>1</sup> , Embedded Python	Red Hat 8: Python 3.6 <sup>2</sup> Red Hat 9: Python 3.9
SUSE Linux Enterprise for x86-64	LDAP, Multithreaded Callin, T-SQL, MQ Interface <sup>1</sup> , Embedded Python	Python 3.6 <sup>2</sup>
Ubuntu for x86-64 or ARM64	LDAP, Multithreaded Callin, T-SQL, MQ Interface <sup>1</sup> , Embedded Python	Ubuntu 20.04: Python 3.8 <sup>2</sup> ; Ubuntu 22.04: Python 3.10 <sup>2</sup>

<sup>1</sup> The minimum version supported by InterSystems IRIS is WebSphere MQ V7.0.

<sup>2</sup> For more information, see the Prerequisites section in Using Embedded Python.

# 2

## Supported Languages

InterSystems IRIS provides National Language Support (NLS) for selected regions in one or more character sets. InterSystems IRIS also includes utility translations for some languages. These localizations exist for the languages as indicated in the following table.

InterSystems IRIS documentation is available in English and Japanese.

### 2.1 InterSystems IRIS

The languages in the following table are supported by InterSystems IRIS in this release:

Language	Character Sets	Utility Translation
Arabic	CP1256 (Arabic), Latin/Arabic, Unicode	
Chinese (Simplified)	GB18030 (Chinese National Standard), Unicode	
Chinese (Traditional)	Unicode	
Chinese (Mandarin)	Unicode	Included
Czech	CP1250 (Central Europe), Latin-2, Unicode	
Danish	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	
Dutch	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
English	ASCII <sup>†</sup> , Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
Finnish	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	
French	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
German	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
Greek	CP1253 (Greek), Latin-G, Unicode	
Hebrew	CP1257 (Hebrew), Latin-H, Unicode	
Hungarian	CP1250 (Central Europe), Latin-2, Unicode	
Italian	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included

Language	Character Sets	Utility Translation
Japanese	Unicode	Included
Korean	Unicode	Included
Lithuanian	CP1257 (Baltic), Latin-4, Latin-6, Latin-7, Unicode	
Maltese	Latin-3, Unicode	
Polish	CP1250 (Central Europe), Latin-2, Unicode	
Portuguese (Brazil)	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
Russian	CP1251 (Cyrillic), Latin-C, Unicode	Included
Slovak	Unicode	
Slovenian	Unicode	
Spanish	Latin-1, Latin-9, CP1252 (Western Europe), Unicode	Included
Thai	CP874 (Thai), Latin-T, Unicode	
Turkish	Unicode	
Ukrainian	Unicode	Included

† US English only.

## 2.2 NLP

The following languages are supported by Natural Language Processing in this release:

- Dutch
- English
- French
- German
- Japanese
- Portuguese
- Russian
- Spanish
- Swedish
- Ukrainian

# 3

## Discontinued Platforms and Technologies

This page discusses the platforms and technologies that this release no longer supports. For information on InterSystems technologies that are deprecated and discontinued, see [Deprecated and Discontinued Features](#).

### 3.1 Discontinued Server Platforms

This release is not available for the following server platform versions:

Platform	
Red Hat Enterprise Linux 7.9 for x86-64	
Red Hat Enterprise Linux 7.0 through 7.8	
SUSE Linux Enterprise Server 12 SP3	
SUSE Linux Enterprise Server 12	
Ubuntu 18.04 LTS	
Ubuntu 16.04 LTS	

### 3.2 Discontinued Container Platforms

This release is not available for the following container base OS versions:

Container Base OS	First Discontinued
Ubuntu 18.04 LTS	version 2021.2
Ubuntu 16.04 LTS	version 2019.1

### 3.3 Discontinued Cloud Platforms

This release is not available for the following cloud platform versions:

Platform	First Discontinued
Ubuntu 10.04 LTS	version 2019.1
SUSE Linux Enterprise Server 12	version 2019.1

## 3.4 Discontinued Development Platforms

This release is not available for the following development platform versions:

Platform	First Discontinued
Apple macOS 10.13, 10.14, 10.15	version 2021.2
CentOS-7	version 2022.2

## 3.5 Discontinued Java Development Kits

This release is not available for the following Java Enterprise specifications:

Java Development Kit	First Discontinued
JDK 1.7	version 2020.1

# 4

## Supported Version Interoperability

This page describes which components of InterSystems IRIS® data platform can be used across different release versions.

**Note:** Throughout this page, “version 2023.1” refers to InterSystems IRIS version 2023.1.

For information about compatibility between InterSystems IRIS and other InterSystems software, see the *InterSystems IRIS Migration Guide* on the WRC distribution site under **Docs**.

### 4.1 ODBC and JDBC Interoperability

InterSystems IRIS ODBC and JDBC Clients are backward-compatible with all earlier versions of InterSystems IRIS. However, using a client with a newer version of InterSystems IRIS is not supported.

Customers are advised to upgrade their client libraries before upgrading their InterSystems IRIS server.

The following table describes the version interoperability between ODBC and JDBC clients, and servers.

Client Version	Server Version
2023.2	2018.1 through 2023.2
2023.1	2018.1 through 2023.1
2022.1	2018.1 through 2022.1
2021.1	2018.1 through 2021.1
2020.1	2018.1 through 2020.1

### 4.2 Web Gateway Interoperability

The InterSystems Web Gateway is backward-compatible with earlier versions of InterSystems IRIS. However, using an earlier version of the Web Gateway with a newer version of InterSystems IRIS is not supported.

Customers are advised to upgrade the Web Gateway before upgrading their InterSystems IRIS server.

The following table describes the version interoperability between the Web Gateway and InterSystems IRIS.

Web Gateway Version	Compatible InterSystems IRIS Versions
2023.2	2018.1 through 2023.2
2023.1	2018.1 through 2023.1
2022.1	2018.1 through 2022.1
2021.1	2018.1 through 2021.1
2020.1	2018.1 through 2020.1

## 4.3 Backup Restore Interoperability

Backups should always be restored on an InterSystems IRIS instance that is running the same, or a more recent version, than the instance that created the backup. This is because an older version of InterSystems IRIS may not be able to process newer features.

## 4.4 Journal Restore Interoperability (Upgrade Implications)

**Important:** Release 2023.3 uses a newer, more compact version of the journal file format compared to previous releases, and this affects the order in which you need to perform upgrades on a mirrored system. Specifically, when upgrading from a release prior to 2023.3, you *must* follow the best practice of upgrading backup members before upgrading the primary.

Journal file restores are guaranteed to be successful when restored on an InterSystems IRIS instance that is running the same, or a more recent version than the instance that created the journal file. More specifically, a journal file restore is guaranteed to be successful if the target instance uses the same version or a later version of the journal file format, relative to the journal file being used. On the other hand, journal file restores are *not* guaranteed to be successful when restoring to an older instance.

As a consequence, for a mirrored system, when you upgrade to a version from one version to another that uses a different journal file format, you must take care to do the upgrades in the correct order. Specifically, always upgrade backup members *before* upgrading the primary.

InterSystems strongly recommends always upgrading to the most recent maintenance release available for your InterSystems IRIS version to ensure feature compatibility.

## 4.5 Mirror Interoperability

All members of a mirror must run on the same version of InterSystems IRIS. There are two exceptions:

1. Mirror members may run on different versions for the duration of a mirror upgrade. See [Upgrading a Mirror](#) in the “Upgrading InterSystems IRIS” chapter of the *Installation Guide*. Once an upgraded mirror member becomes primary, you cannot allow the other failover member or any DR async members to become primary or access the application, until that member has been upgraded.

2. Async members may run on a different version than the other members of the mirror, for the following reasons:
  - DR async members may continue to run on an older version for an extended period of time, as part of a broader upgrade strategy. For example, to fall back to after upgrading the primary and backup members.
  - Reporting async members may run on a newer version to take advantage of a newer reporting features when upgrading the primary and backup members is not warranted.

Mirroring relies on journaling, hence the restrictions and recommendations described in the previous section also apply here.

## 4.6 Mirror Arbiter (ISCAgent) Interoperability

The ISCAgent serving as arbiter does not have to run the same version of InterSystems IRIS as the members of the mirror for which it is configured. We recommend that the arbiter always run a version greater than or equal to the highest version of the mirror members that connect to it. InterSystems recommends that you upgrade the arbiter when you upgrade the mirror members, so you can be sure to have the latest version of the ISCAgent.

## 4.7 ECP Interoperability

ECP is backward and forward compatible between InterSystems IRIS versions. This includes compiled routines and class definitions, which can be passed over ECP and run on instances that are running a different version of InterSystems IRIS. However, application code on both ends of an ECP connection must be compatible. For example, if your code performs different business logic on different ECP servers, then your overall application behavior will be unpredictable.

Customers are advised to ensure that their feature usage is compatible with all of their versions of InterSystems IRIS that are connected via ECP. For example, InterSystems IRIS 2021.2 introduced transparent stream compression. If a newer server writes stream data via ECP to an older server, the stream data won't be readable on servers running versions that don't support transparent stream compression. Such incompatibilities can exist and are typically addressed in Maintenance Releases. InterSystems strongly recommends always upgrading your ECP configurations to the most recent maintenance release available for your InterSystems IRIS version.

## 4.8 Studio Interoperability

Studio is backward-compatible with earlier supported versions of InterSystems IRIS. However, using Studio with a newer version of InterSystems IRIS is not supported.

The following table describes the version interoperability between Studio and InterSystems IRIS.

<b>Studio Version</b>	<b>Compatible InterSystems IRIS Versions</b>
2023.2	2018.1 through 2023.2
2023.1	2018.1 through 2023.1
2022.1	2018.1 through 2022.1
2021.1	2018.1 through 2021.1
2020.1	2018.1 through 2020.1

# 5

## Cross-Product Technology Matrix

In general, connectivity components of InterSystems IRIS are not compatible with older InterSystems products. However, there are certain exceptions. For information about cross-product compatibility, see “Coexistence & Compatibility” in the InterSystems IRIS Migration Guide. You can download this guide from the [WRC Document Distribution page](#) (login required).
